To control steppers, both transistor network or H-bridge can be used to apply the correct sequence of impulsions to the coils or phases of the stepper. For the unipolar example, we used transistor network ULN2003A . For the bipolar example, we used an H-bridge, SN754410NE.

Example with stepper 28BYJ-48 Schematics. Steppers required a power supply of 3V, 5V or more. External power supply should be preferred especially if the motor requires more than 5V.
