[Differential Pressure Flowmeter Technology - Flowmeters ...](#)

Differential pressure flowmeters introduce a constriction in the pipe that creates a pressure drop across the flowmeter. When the flow increases, more pressure drop is created. Impulse piping routes the upstream and downstream pressures of the flowmeter to the transmitter that measures the differential pressure to determine the fluid flow.

Therefore, it is useful in slurry measurement. A differential pressure transmitter is used to measure pressure between either sides of the wedge. However, this type of differential pressure flow meter technology can be constructed to work as either a gas or a liquid flow meter. [Differential Pressure Flow Meters \(DP Flow Meters\)](#)
