[FAQ: What are Hall effect sensors and what is their role ...](#)

This is the job of the Hall effect sensors to monitor the rotor's position. BLDC motors typically have three Hall effect sensors mounted either to the stator or to the rotor, and use what is known as six-step commutation. When the rotor passes a sensor, it produces either a high or a low signal to indicate which rotor pole (N or S) has passed.

Hall sensors measure magnetic fields so they can have 2 functions... as a Tacho output by measuring the pulses as the magnetic field changes in the motor due to it rotating. So you can determine if the fan has stopped. as a sensor for measuring the magnetic field and hence current in a DC circuit.
