R404A Refrigerant | Europe

R404A is a HFC blend, used as a replacement for R502 and R22 in low and medium temperature refrigeration applications. Although it is a popular refrigerant, R404A is under great scrutiny due to its high Global Warming Potential (GWP). This has led to an increased focus on lower GWP alternatives such as R407F and R407A, along

with newer alternatives such as R448A and R449A.
R407A/F - low GWP alternative to R404A in refrigeration ...

It is a blend of R32, R125 and R134a, and is related to R407C, but has a pressure which better matches R22. With the recently started discussion to reduce the GWP on refrigerants, R407A/F could also be an alternative as R404A/R507 replacement.

* Service refrigerants contain HCFC as blend component. They are therefore subject to the same legal regulations as R22 (see page 8). They are therefore subject to the same legal regulations as R22 (see page 8).
