[Vacuum forming - Wikipedia](#)

Vacuum forming is a simplified version of thermoforming, where a sheet of plastic is heated to a forming temperature, stretched onto a single-surface mold, and forced against the mold by a vacuum. This process can be used to form plastic into permanent objects such as turnpike signs and protective covers.

[Vacuum Forming Page 1 - technologystudent.com](#)

Vacuum forming is used when an unusual shape like a dish or a box-like shape is needed. Below you can see the stages involved in vacuum forming. To the right is an example of a vacuum formed toy. The simple 'lorry' mould has been placed in a vacuum former and a compressed polystyrene sheet has been placed above it.

Another DIY Vacuum Former: I'll be updating it today with instructions and pictures on the actual use of the vacuum former.

[How to Use a Vacuum Cleaner | Hunker](#)

Examine the area of the vacuum where it deposits dirt. In

older vacuums, this is a bag. In new ones it is often a removable and reusable canister. If the bag is full, you need to change it; if it is a reusable container it should be emptied as often as possible. If the deposit area is full the vacuum won't be able to pick up dirt effectively.
